Statement	Instructor's Question	Student's Question	Non-Chemistry Usage
Physical chemistry is the most theoretical specialization and uses the most math.	What's the difference between a physical change and a chemical change? Explain why the physical properties of water are so out of line with its low molecular weight.	I'm not sure. Is the freezing of water into ice a physical change or a chemical change or can't it be both?	Don't you dare get physical with me!
