a NA ly sis	4	second

Statement	Instructor's Question	Student's Question	Non-Chemistry Usage
Analysis is the process by which something, which can be a chemical substance or an abstract idea, is broken down into its component parts. The reverse process of building more complex things from simple components is known as synthesis.	Here's a simple question. What is the first step in the analysis of copper in a mineral?	This may be a simple question, but what's the difference between qualitative analysis and quantitative analysis?	Some people spend years in psychoanalysis.
