Ll quid	2	first

Statement	Instructor's Question	Student's Question	Non-Chemistry Usage
A liquid takes on the shape of its container but may not fill that container. We use liquid <a href="#">nitrogen</a> , argon or even helium to keep something very cold.	Which usually has the greater density, the solid phase or the liquid?	So, how much liquid should be added to the <a href="#">sample</a> to make the right concentration?	To have a liquid lunch means to drink <a href="#">alcohol</a> without eating and it is not very wise.
